Foreword

This Manual contains program listings for sixteen games specially designed for use with the RCA COSMAC VIP (Video Interface Processor) CDP18S711 or CDP18S022. These games supplement the twenty video games listings provided in the basic Instruction Manual for the RCA COSMAC VIP. All sixteen new games require the CHIP-8 interpreter program which loads at 0000. The games start at 0200 and are eight pages.

The listings for these sixteen games are in the same form as the twenty games in the RCA COSMAC VIP Instruction Manual. The first column is the memory location at which the instruction byte in the second column is stored. The comments in the third column, which indicate the function of the instruction byte, are not stored in memory.

When you store these new games, all sixteen will easily fit on a 30-minute cassette. If you run into any problems, go back to your RCA COSMAC VIP Instruction Manual for a refresher. If you have been developing your own video games, however, you won't need it.

These sixteen games were developed by the computer hobbyists whose names are given below with the titles of the games they developed and programmed. They hope that you will have as much fun playing them as they did in developing them.

Incidentally, if you have developed and programmed any unique new video games or other similar interesting applications of the COSMAC VIP and would like to share them with other hobbyists, tell us about them. We have started our planning for the next edition of the RCA COSMAC VIP Game Manual and might be interested in purchasing software that qualifies for publication in it. Contact:

16. VIP Blockout	Steve Houk	78

1. VIP Pinball

The VIP PINBALL game simulates the action of real pinball machines. The object of the game is to keep your ball in play and score as many points as you can by ball contact with point bumpers. The point value of bumpers changes randomly when hit. Points range from 2 to 9. A score greater than 999 stops the game.

VIP PINBALL can be played by one or two persons. Players take turns scoring points and control flippers on their own keyboard throughout the game. A player can change ball direction with a special key. However, overuse of this feature will result in a "TILT".

How To Play VIP Pinball

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game starting at 0200.
- 2. Turn RUN switch on.
- 3. Select the one-player game with key 1. Select the two-player game with key 2.

- 4. In the two-player game, players alternate turns. Players get five balls. The number of balls remaining is shown at the right or left of the players score. Your turn to put a ball in play is shown by a flashing digit (balls remaining) on your side of the TV screen.
- 5. To put a ball in play, press key 1.
- 6. Press key 4 to control the left flipper and key 6 to control the right flipper.
- 7. You can press key 0 to reverse the direction of the ball. This feature is handy for saving a ball (outside the flipper range) that will go out of bounds. This feature simulates physically pushing on a PINBALL game cabinet. Pressing key 0 causes the ball to move at high speed. While the ball travels at high speed, key 0 has no effect.
- 8. If you overuse key 0, you will cause a "TILT" and the game will stop. If the two-player option was selected and the other player has balls left, press key 1 to put a new ball in play.
- 9. The game is over when either player scores more than 999 points, when both players have "TILT", or when both use all their balls.

2. VIP Message Center

The VIP MESSAGE CENTER program permits you to record in the computer memory and display letters, numbers, and special characters on the TV. The characters saved in the computer memory are recalled for continuous repetitive display of a message on the TV screen. You can choose two types of display formats. The typewriter format lets you fill the entire screen; the ticker tape format shows a line of characters in motion across the screen. This latter format is useful for words longer than ten characters.

The typewriter display is arranged into five lines of ten characters per line. The ticker tape display shows a line of ten characters. Up to 256 different characters and display commands can be saved in the computer memory. This corresponds to about three completely filled TV screens. There are 56 characters you can select: 0-9, A-Z, space, comma, box, period, colon, ellipsis, exclamation point, question mark, hyphen, dollar sign, cent sign, percent sign, single quote, double quote, plus sign, minus sign, times sign, division sign, slash, and equal sign.

The keyboard controls the selection of a character and starting or stopping the message display. The keyboard also provides the following display commands: the time to delay before displaying more parts of a message, clearing the screen, spacing between characters, and beginning a new line.

Should you make a mistake entering a character, you can correct it. You go through the message stopping where you made your error. You then overwrite the message with the intended character(s).

How To Use VIP Message Center

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game starting at 0200.
- 2. Turn RUN switch on.
- 3. Select the type of display:

Key 1 selects the typewriter format and saves the message characters in the computer memory.

Key 2 selects the ticker tape format and saves the message characters in the computer memory.

- 4. A flashing character indicates the display position where a character will go when selected. The flashing character will not appear in the message unless it is saved.
- 5. Key 1 selects the next character in the character sequence (see Instruction 11) to the left of the flashing character.

Key 3 selects the next character in the character sequence to the right of the flashing character. Holding down either 1 or 3 changes the character continuously.

Key 2 saves the flashing character in memory.

Key 6 stores a time delay corresponding to how long you hold this key down. The time may be as brief as a quarter of a second.

Key 7 clears the screen and stores a "clear screen" command.

Key 8 stores a space character and positions for the next character.

Key 9 starts a new line (typewriter format only) and stores this command.

Key 0 starts the message display.

Key 4 is used to step through the message to allow editing.

Key 5 stops the display at a character.

- 6. When you reach the end of the line (10 character) in the typewriter format no character will flash. You must press key 9 to start a new line.
- 7. You can select the space character using keys 1 or 3. See character sequence in Instruction 11.
- 8. The typewriter format rolls the top line off the screen. These characters are saved.
- 9. Key 2 is useful for skipping over characters when you are correcting a message. Care must be exercised so that you do not overwrite a stored command (such as a new line) unintentionally.
- 10. You can change the time for the ticker tape movement by altering location 04B7. Increase this value to increase the delay (units of a 60th of a second).

11. The character sequence is:

□ 0123456789ABCDEFGHIJKLM NOPQRSTUVWXYZ +-×÷/=

3. VIP Bingo

VIP BINGO automatically calls and verifies BINGO numbers. The computer selects numbers randomly and displays the last three numbers drawn. After a player calls "BINGO", the computer will check the player's numbers against a list stored in its memory. The computer adds the numbers checked to give the player a score for that round of play.

There are two modes for drawing numbers. Using the manual mode, the operator must press a key to obtain a new number. Using the automatic mode, the computer draws numbers every twelve seconds until halted by the operator. Using a third mode, verify, the operator enters numbers on the keyboard for the computer to check against the list of numbers called.

How To Play VIP Bingo

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game starting at 0200.
- 2. Turn RUN switch on.

0200 KOAE VO-AE

- 3. Key "A" starts calling numbers in the manual mode. Press key "A" for every new number. New numbers appear at the bottom of the display and are rolled upward.
- 4. Key "B" starts calling the numbers in the automatic mode. New numbers appear every twelve seconds until all numbers are called. You can press key "A" to enter the manual mode, or key "C" to stop calling numbers.
- 5. Key "C" starts the verify mode. Enter two digits for each number making up a winning BINGO card. (Note: press 01 for B-1, 02 for B-2, 75 for 0-75, etc.) If the number was called, "OK" will show; if it was not called, "NO" will show. If all five numbers are OK, press key "F" to display the score for the numbers entered. The score will be displayed followed by "PT" (point total). You do not have to enter any number for "FREE". If one of the numbers verified was not called, you can resume calling numbers as in Step 3 or 4. You may also press key "C" to restart verify if you make a mistake entering a number.

4. VIP Blackjack

VIP BLACKJACK (also known as TWENTY-ONE) is a one-or two-player game. The VIP BLACKJACK (one-player) game uses 2048 bytes (minimum system). The SUPER VIP BLACKJACK (two-player) game requires 3072 bytes.

These games follow standard BLACKJACK rules. The VIP computer is the dealer. Both the dealer and players try to get cards that add up to "21". Each number card counts its face value; Ten, Jack, Queen, and King count 10; and Aces count as either one or eleven. A hand containing an Ace that counts as eleven and does not cause the total to exceed 21, is a "soft" hand. All other hands are "hard."

The VIP BLACKJACK dealer draws on soft 17, hard 16, or less. The dealer deals from two standard decks. Before dealing a new hand, if the number of cards in the combined decks is less than 22, the dealer automatically shuffles the cards. Pair splitting and insurance are not allowed. All winning hands pay 1 to 1, except blackjack, which pays 2 to 1.

Players who lose their stakes are dropped from the game. The game ends either when both players have lost their stakes, or when one player breaks 999.

How To Play VIP Blackjack (One-Player)

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game starting at 0200.
- 2. Turn RUN switch on.
- Select one-player blackjack by pressing key '1'.
 Select two-player blackjack by pressing key '2'.
- 4. Your stakes will appear at the bottom right corner of your TV screen.
- 5. Whenever "CUT" appears on the screen, the dealer will shuffle the cards and wait for you to cut. Press key 0 to continue play.

- 6. Whenever "BET" appears on the screen, you enter your single-digit bet by pressing key 1 through 9, press key 0 to enter a bet of 10. Your bet will be displayed slightly above and to the left of your stakes.
- 7. After all bets are entered, two cards will be dealt to you and the dealer. The dealer's cards are on the top of the screen. One of the dealer's cards will be face down (hole card).
- 8. If the dealer has a natural (21) and you do not, you lose your bet. If you also have a natural, you get your bet back, and a "T" for tie appears in the bet position.
- 9. If the dealer does not have a natural and you do, you get three times your bet back. a "W" for win appears in the bet position.
- 10. When neither you nor the dealer has a natural, the word "HIT" will appear on your screen. You must either stand, hit, or double down.

It is your turn when your bet flashes.

- —You Stand (indicating you have enough cards) by pressing key 0.
- —You Hit (Indicating you want another card) by pressing key 1.

You can draw up to 5 additional cards for a maximum of 7 cards in your hand.

—You Double Down (indicating you want one more card and double your bet) by pressing key 2. Your bet will change on the screen.

You keep your turn after Hitting if the card count is 21 or less. You give up your turn after Standing, Doubling Down, or Busting (going over 21).

- 11. After you have finished your turn, the dealer turns up his hole (down) card. If you are still in the game, the dealer draws cards to his hand whenever it adds up to soft 17, hard 16, or less.
- 12. If the dealer goes over 21, you win unless you already busted. If you win, a "W" appears in the bet position and you receive twice your bet. If you tie the dealer (push), a "T" appears and you get your bet back. If your hand is less than the dealer's, you lose your bet.

5. VIP Slide

Slide is a two-person game. Each player tries to slide a "puck" over the high-scoring "spots" without hitting the back wall.

How To Play VIP Slide

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game starting at 0200.
- 2. Turn RUN switch on.
- 3. The puck moves up and down randomly. Press

- "0"-key to stop the puck. The puck will move towards the spots after you release the key. The longer you hold the key down, the further the puck travels (maximum time approximately 2.5 seconds).
- 4. You get 2 points for hitting the first spot, 4 points for either of the next two spots, and 8 points for either of the last two. The highest score possible is 216 (two spots can be hit on one slide).
- 5. If you hit the back wall, though, you get zero points for that slide, even though you've hit a spot.
- 6. Each player gets 3 pucks per turn and 6 turns in a game.

6. VIP Reversi

REVERSI is a game over 100 years old, which has become popular recently under the name OTHELLO. The game is played on an 8×8 square, using two kinds of markers. In VIP REVERSI one player has the open markers and the other player the solid markers. The score for either player at any time is the total number of his markers on the square.

How To Play VIP Reversi

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game starting at 0200.
- 2. Turn RUN switch on.
- 3. The 8×8 square will be formed and the starting marker configuration shown, having two of each kind of marker in the center four locations of the square. The starting score for each player is shown as 02 above a line of his markers.
- 4. Your VIP indicates the player's turn by blinking that player's score and also blinking a cursor-dot in the 8×8 square. A player moves the blinking cursor-dot in the 8×8 square by pressing the direction keys 1-4 and 6-9 as shown.

0200 6D02 VD=02 0202 6E02 VE=02 0204 6C00 VC=00 0206 A2D7 I=02D7 0208 6B00 VB=00 020A 6A11 VA=11 020C DAB3 SHOW 3MIRVAVB 020E 3A2D SKIP\$VA EQ 2D 0210 121A GO 021A 0212 4B1C SKIP; VB NE 1C 0214 121E GO 021E 0216 7B04 VB+04 0218 120A GO 020A 021A 7A04 VA+04 021C 120C GO 020C 021E 6A1D VA=1D 0220 6B0C VB=0C 0222 DAB3 SHOW 3MI@VAVB 0224 7A04 VA+04 0226 7B04 VB+04 0228 DAB3 SHOW 3MI@VAVB 022A A2DA I=02DA 022C DAB3 SHOW 3MIQVAVB 022E 7AFC VA+FC 0230 DAB3 SHOW 3MI@VAVB 0232 7BFC VB+FC 0234 DAB3 SHOW 3MI@VAVB 0236 7A04 VA+04 0238 DAB3 SHOW 3MI@VAVB 023A 6002 V0=02 023C 22DE DO 02DE

5. When the cursor-dot is properly located, the player presses key 5 to place his marker on the square. You will find that your VIP will not allow you to make a non-valid play. The only

placements allowed are ones for which at least one of the other player's markers is surrounded between an existing marker of your own and your new marker being placed. All these markers must be in consecutive positions on the square and can be in any horizontal, vertical, or diagonal direction. Once a new marker has been placed, your VIP will change all such surrounded markers of the other player to your kind and change the scores.

6. Sometimes it may not be possible for a player to make a valid move. If this happens he must forfeit his move by pressing the "F" key! The game ends when neither player can play or when the 8×8 square is completely filled with markers. The goal is to end the game with the highest score. Do not be discouraged if during the game you seem to be losing because this is a game with dramatic reversals! Develop a winning strategem and become a champion!!

7. VIP Bowling

Bowling is a great game for recreation and competition requiring skill and a little bit of luck. This program simulates bowling closely with regular scoring and the option of using three different spins on the ball.

How To Play VIP Bowling

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game starting at 0200.
- 2. Turn RUN switch on.
- 3. Up to 6 persons can compete. Make the choice by pressing KEY 1, 2, 3, 4, 5, or 6. The players will be referred to as A, B, C, D, E, and F.
- 4. It is possible to play up to 10 frames in one game. Make your choice of the number of frames by pressing KEY 1, 2, 3, 5, 6, 7, 8, 9, or 0 (for 10 frames).
- 5. It is possible to choose 3 ball speeds (KEY 1, 2, or 3). The speed option only affects the ball after it is released.
- 6. At the start of a player's turn, the video will display whose turn it is and whether he is working on a spare, strike, 2 strikes, or nothing.

Release the ball by pressing one of the following keys: KEY 1, 2, 3, 5, 7, 8, or 9.

- -KEY 5 will cause a straight ball.
- —KEY 1, 2, and 3 will cause the ball to spin up—KEY 1 before the first pin, KEY 2 after the first pin, and KEY 3 after the second pin.
- —KEY 7, 8, and 9 will cause the ball to spin down—KEY 7 before the first pin, KEY 8 after the first pin, KEY 9 after the second pin.
- 7. After the player's turn ends, the video will display whose turn it was, the frame, and the score. The next player follows the instructions at 6 above.
- 8. After all players have had their turn in a frame, the video will display the total of each player and whether he is working on a spare, 1 strike, 2 strikes, or nothing. It will display the frame number and the total number of frames to go (unless the last frame was played).

After pressing any key, player A can start in the next frame. Continue with instruction 6 above.

- 9. If all frames in the game have been finished, press any key again. The players who are still working on a spare will receive 1 more ball, and those working on 1 or 2 strikes will receive 2 balls.
- 10. After all players have finished the game the final score will be displayed.

8. VIP Deflection

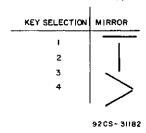

In the VIP DEFLECTION game you position mirrors anywhere on the display screen. The object of the game is to deflect a ball off the mirrors a maximum number of times before hitting the target.

The number of deflections times the target number gives you deflection points. These are added to your previous point total. If you fail to hit the target you get no points. The winner of the game is the player who accumulates 257 or more deflection points.

How To Play VIP Deflection

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game starting at 0200.
- 2. Turn RUN switch on.
- 3. After the scores appear a letter, the target with a number, and the ball. The letter signifies the player who will program the mirrors. This sequence will be repeated until there is a winner.
- 4. To program the mirrors select the proper mirror type by using Table 1 as a guide. Key 1 will place a horizontal mirror on the board. Key 2 selects a vertical mirror, Key 3 a slant-left mirror, and Key 4 a slant-right mirror.

Table 1 - Mirror Types

5. After a mirror has been selected you may position the mirror by using keys 1 through 4 and 6 through 9 (see Table 2 for movement of a mirror). Once a mirror has been selected and positioned it may be fixed into position by pressing key 5.

Table 2 — Mirror Positioning and Ball Direction

Key Selection	Positioning and Direction
1	up and to the left
2	up
3	up and to the right
4	left
6	right
7	down and to the left
8	down
9	down and to the right

- 6. You may position up to 10 mirrors on the game board. After you have the maximum amount on the board you must press key 0 to progress to the fire mode. If you wish to progress to the fire mode with less than 10 mirrors programmed you may do so by pressing key 0. You fire the ball in the direction you want by using keys 1 through 4 and keys 6 through 9 (see Table 2).
- 7. After the ball has reached the target or leaves the game board, the player's score is computed and displayed and a new ball and target appear.

9. VIP Animal Race

ANIMAL RACE is a fun game for one person, with an element of luck—sure to put a smile on your face. Five different animals race against one another and you have the chance to test your expertise at picking the winner.

How To Play Animal Race

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game starting at 0200.
- 2. Turn RUN switch on.
- 3. Wait until the animals are lined up and ready to start, then select an animal by pressing a letter A through E. A mark will appear to the left of the animal to remind you of the one you have selected.

- 4. Decide you much you want to bet (up to a limit of \$9), then press that key.
- 5. After the race is over press zero (or any key) to start the next race. Your winnings or losses will be computed and the new total displayed at the beginning of the next race.

Hints for Expert Players

All animals move at approximately the same speed but they start from different positions. The odds for each animal are related to the starting position but include a random element. Some races favor the player and you should bet up to the limit on these. Some races are unfavorable and you should bet carefully on these.

You can win the game by accumulating \$256 or more.

10. VIP Most Dangerous Game

VIP MOST DANGEROUS GAME pits a hunter against a hunted in a maze. The hunter must shoot the hunted before either time runs out or the hunted escapes the maze. However, neither the hunted nor the hunter can see a wall in the maze until he runs into it. There is always at least one path through the maze.

How To Play VIP Most Dangerous Game

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game program starting at 0200.
- 2. Turn RUN switch on.
- 3. Hunted's turn:

When the arrow appears in the lower left, it is the hunted's turn. Keys 2-4-6-8 control direction (up-left-right-down, respectively). The hunted continues to move until a) he makes 5 moves, b) he hits a wall, or c) key 0 is pressed.

4. Hunter's turn:

When the arrow appears in the lower right, it is the hunter's turn. The hunter's turn consists of two modes, the move and the shoot. Keys 2-4-6-8 and 0 control both modes. Like the hunted, the hunter continues to move until a) he makes 3 moves, b) he hits a wall, or c) key 0 is pressed. If he hits the wall, case b), he cannot fire a bullet. The hunter may fire one of his bullets using the direction keys 2-4-6-8. The bullet will travel four squares in the corresponding direction, unless a wall is encountered. If the hunter prefers not to use a bullet, he must press key 0.

- 5. Repeat steps 4 and 5 until:
- a) The number of turns (upper left on the display) expire. The hunted wins.
- b) The hunter lands on or shoots the hunted. The hunter wins.
- c) The hunted lands on the hunter, thereby giving up. The hunter wins.
- d) The hunted reaches the lower right corner of the maze with at least 1 move remaining in his turn. The hunted wins, by escaping the maze.
- 6. Variations of VIP MOST DANGEROUS GAME may be played by changing certain bytes in the program.

LOCATION	DEFAULT	MEANING
0215	0F	Number of turns
		in the game.
0217	06	Number of bullets
		hunter has at start.
0219	03	Number of moves
		per turn for the
222		hunter.
0221	01	Number of squares
		per move (hunted
0000	0.0	and hunter).
022B	05	Number of moves
		per turn for the
00.40	01	hunted.
024B	01	If zero, walls are
0255	0.4	invisible.
0355	04	Number of squares
04E3	70	a bullet will go.
U4E3	70	Probability (out of
		100 _{hex}) of a wall
04EB	FE	appearing.
V4ED	L E	If FF, a wall may
		appear at
		previously tested boundaries.
		boundaries.

11. VIP Sum Fun

The object of this game is to add up the three digits which appear in the middle of the screen and then hit the key representing the total as fast as you can.

How To Play VIP Sum Fun

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game starting at 0200.
- 2. Turn RUN switch on.

- 3. You get twenty sets of three digits per game and between zero and ten points per set. The faster you enter the correct total, the more points you win.
- 4. If you wait more than 3 seconds you get zero points. The correct sum is shown above the three digits after you enter it, and there is a pause before the next set appears.
- 5. The score is shown in the upper right-hand corner of the screen. The maximum number of points you can score is 200. Between 120 and 159 points is above average. A score of 160 or higher is outstanding.

12. ViP Sequence Shoot ,

You score points by having the sharp-shooter hit the targets in the proper sequence.

How To Play VIP Sequence Shoot

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game starting at 0200.
- 2. Turn RUN switch on.
- 3. Pressing the key C causes the little man to shoot the top target, key D shoots the one below it, key E the next lower, and key F the bottom target.
- 4. One of the four targets flashes and the computer waits for you to shoot it. When you press the correct key you get one point. Then two flash, one after the other. Shoot the one that flashed first, then shoot the other. This gives you two more points. Three targets (when hit in the same order as they flashed) add three points to your score.
- 5. Each time you shoot such a series of targets in proper sequence, your score increases by the number of targets you hit. And the next series you see is longer by one target. The maximum length of sequence is 22 targets, that is a score of 254.
- 6. Improper sequencing of shots in any series ends the game.

13. VIP Biorhythm

The theory of Biorhythm states that there are three predominant cycles that can influence human behavior. These include a 23-day physical cycle, a 28-day emotional cycle, and a 33-day intellectual cycle. All three cycles start at birth and continue throughout life.

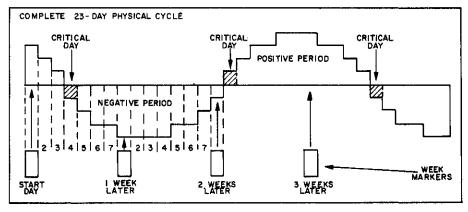

Each cycle consists of a positive and a negative period. Physical, emotional, and intellectual aspects are enhanced during positive periods. Poor performance is indicated by the negative period of a cycle.

A critical day occurs on the crossover from the positive to negative period or vice versa. A critical day indicates instability in a particular aspect.

How To Use VIP Blorhythm

- 1. Load the CHIP-8 interpreter at 0000-01FF and Biorhythm starting at 0200.
- 2. Turn RUN switch on.

- 3. Enter birthdate using 2-digit month, 2-digit day, and 4-digit year.
- 4. Enter start date using 2-digit month, 2-digit day, and 4-digit year. The start date indicates the first day of the 32-day Biorhythm chart the program will generate.
- 5. After a period of calculation proportional to the span of time involved, the three cycle curves will be shown for a 32-day period. Each horizontal bit position represents one day in the cycle. The start day, on the left, and every seventh day are indicated by week markers. The first day of a positive or negative period is a critical day.
- 6. To advance the start date hold key F down until the desired date is reached. To decrement the start date hold key B down. These functions allow changing the start date slightly without reentering all the dates and waiting for the calculations to be performed.
- 7. Press key 0 to clear the screen and enter a new set of dates.

92CM-31180

INTERPRETATION

	Physical	Emotional	Intellectual
Positive Period (Up)	strong, vigorous	good moods, cooperative	good judgment, sharp mentally
Negative Period (Down)	tire easily, less stamina	low enthusiasm, feelings subdued	low attentiveness and concen- tration
Critical Days (Crossover)	susceptible to injury or illness, low endurance	emotionally unstable, upset easily	poor memory, prone to mistakes

14. VIP Programmable Spacefighters

Programmable Spacefighters is a combat game involving 2 to 8 spaceships competing for the domination of a contained field in space. The field of play is a two-dimensional representation of the surface of an oblong spheroid.

The movement and fire of each spacefighter is controlled by programming a series of commands into each fighter's instruction storage table. Once all the spacefighters are programmed they carry out their commands by sequentially executing a single step at a time. The play of the game is divided into rounds. Each spacefighter may execute between 1 and 15 commands per round.

The fighters all have the same appearance and capabilities. Players distinguish between fighters by examining the defense strength and position of their fighter at the beginning of every round.

Each fighter may face in any of 8 directions. All firing and forward movement occurs in the direction a fighter is currently facing. As a spacefighter crosses outside the two-dimensional field of play it wraps around and re-enters on the opposite side of the field. Laser bursts terminate when they travel outside the field or hit a target.

Each round consists of a selected number of steps. Each step is executed in 2 parts. During the first part, every spacefighter wishing to fire may execute a fire operation. The defense strength of any fighter which is hit by a laser burst is reduced by 1 and a small flash appears.

After all fighters have had an opportunity to execute fire instructions, the movement part of the step begins. Any fighter which has had its defense strength reduced to 0 is destroyed and a longer flash appears. The defense strength is changed to a special code so that the fighter will no longer be programmable or take part in the execution phase. The destroyed fighter will still be open to examination during the Defense/Position Check phase. Fighters having a defense strength greater than 0 may execute a movement command if there is one. Breaking each step into 2 such parts removes any strategic advantage to moving first.

The nature of the game, in that there are variable parameters and no fixed victory conditions, allows the players a lot of freedom. Two to eight players can command single fighters. Four or less players can each command multiple fighters. Two fleets could compete to destroy their opponents' flagship first. Handicaps can be implemented through an imbalance of fighters in different fleets. An odd number of players can play in a free-for-all or team

game. In a non-combat approach, a full complement of spacefighters could be programmed to perform in kaleidoscopic or other type formations.

How To Play VIP Programmable Spacefighters

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game starting at 0200.
- 2. Turn RUN switch on.
- 3. Initialization of Game.

Various parameters are entered at the start of the game to determine the number of spacefighters and other aspects of play.

- S: Enter number of spacefighters. 1 to 8 spacefighters may be used. The program will adjust invalid entries to the nearest valid number.
- D: Enter defense strength. A spacefighter may be hit from 1 to F times by laser fire before being destroyed.
- E: Enter number of command entries. A spacefighter may be programmed with 1 to F commands during the programming phase of each round.
- C: Enter clock duration/no clock. A timer clock 1 to F phorseks in duration may be selected. Each phorsek equals 4 seconds. The clock is not enabled if a 0 is entered. The clock time is the time allowed for each fighter to be set up.
- F: Enter fire power available. A spacefighter may be allowed to fire 1 to F laser bursts per round.
- A: Enter accumulation/no accumulation. A spacefighter may be allowed to accumulate all unused laser bursts by entering 1 to F. Accumulation is not allowed if a 0 is entered.
- 4. Presentation of Field and Spacefighters.

The two-dimensional representation of the playing field consists of 10 vertical by 15 horizontal positions indicated by grid markings around the perimeter. The spacefighters will be in their initial positions.

5. Defense/Position Check.

Enter number of spacefighter to be examined.

- S: Current spacefighter being examined.
- D: Defense strength of current spacefighter. Enter 0 to end defense/position check phase.
- 6. Program Spacefighters.

Surviving spacefighters are programmed in ascending order. Enter 0 to begin programming first spacefighter. Defense strength and position are shown during programming.

E: Indicates number of entries left after current

C: Indicates time remaining to program current fighter if clock was selected.

OVE
VE
S AND
NT
OF
HTER
N
AM-

ENTER 0 TO BEGIN PROGRAMMING EACH SUCCESSIVE SPACEFIGHTER.

7. Execute Commands

Enter 0 after all spacefighters are programmed to start execution of commands.

8. The recommended starting point when trying the game out is with 1 or 2 spacefighters, any defense, F (15₁₀) entries per round, no clock, F(15₁₀) fire power and any accumulation:

S:	1 or 2
D:	1
E:	F
C:	0
F:	F
A:	0

Use the above to try out the movement and fire execution of the fighters. Try performing loops, figure 8's, tight turns, maximum fire coverage techniques, etc. Start out simple when first playing the game against an opponent. Eight spacefighters can get very complicated.

9. Changing different parameters creates very different effects on the play of the game. The main effect of a large number of fighters is a more complicated game. A large number of entries per round results in a more lively game involving farsighted planning. Fewer entries involves more thinking and reacting to immediate developments but is not without strategy when there are multiple fighters opposing each other. The clock provides pressure which can be greatly increased by the moves-to-time ratio. More fire power produces a more violent game while less fire power increases the importance of movement and positioning. Accumulation of fire power can have long range effects if there is low fire power and a large number of moves per round.

15. VIP Lunar Lander

You are descending to the floor of a 250-foot crater. The right side of the TV display shows amount of fuel, feet from the bottom, and fall rate per cycle. Length of fall rate cycle changes from about ¼ second to one second. The fall rate increases by one foot per second/per cycle. The computer will update the display only at the end of each cycle.

The left side of the display shows the Lunar Lander descending from 250 feet. The Lander will first appear at one of sixteen locations. It will then slowly drop down the crater. The crater walls have rock formations protruding from them which must be avoided. If either rocket motor should touch any part of the crater, the Lander will explode in a cloud of smoke, and disintegrate. (Remember, these are atomic thrusters and react like miniature atomic bombs upon impact.)

When you reach 32 feet, the display will change, and you will see the crater floor. You must now land between the rock formations on the floor, and maintain a minimum fall rate. As you drop your fall rate to zero, you soon discover that the Lander becomes more and more unstable just as any hovering object would. And now with perfect skill you guide the ship in for a perfect touch down, or?

How To Play VIP Lunar Lander

- 1. Load the CHIP-8 interpreter at 0000-01FF and the game starting at 0200.
- 2. Key 2 controls the thrust of the Lunar Lander. One tone beep equals one pound of fuel and one foot of thrust.
- 3. Key 4 controls the horizontal stabilizing engine, and moves the Lander one foot to the left per one pound of fuel.
- 4. Key 6 controls stabilization to the right.
- 5. Stabilization controls only react after: (a) a complete fall cycle, or (b) after the key 1 thrust control is pressed. You must be aware of this at all times or you will crash even though either key 4 or 6 is pressed.
- 6. At the end of each cycle, the Lunar Lander will move randomly at the rate of one foot either right or left. Therefore, as the fall rate approaches zero, the Lander becomes more uncontrollable, and your horizontal stabilizers react more quickly. (Just like the real thing.)
- 7. If you land too fast, the Lander will bounce and flip over.
- 8. If you run out of fuel, the Lander will crash.

- 9. You will not be allowed to go above 250 feet. If you try to do so you will just waste fuel.
- 10. Once you reach 32 feet and move into the landing display, you will not be allowed to rise above 26 feet. Trying to do so will waste fuel.

11. Game Options

You may select one of three options at the beginning of the game.

Option: 1—You start at 250 feet. You are given 150 pounds of fuel. You must land at 5 feet per second or less. The initial descent display is easy to maneuver through.

Option: 2—You start at 250 feet. You have 200 pounds of fuel. You must land at 3 feet per second or less. The initial descent display is hard to maneuver through.

Option: 3—You start at 32 feet. You have 100 pounds of fuel. You must land at 3 feet per second or less. This display allows you to practice landing. You should consider Option: 2 as the complete game when trying for Astronaut Ratings.

12. Astronaut Ratings

The computer will award you with ratings depending on how good a lander you are:

You will obtain the rating of Astronaut by landing without regard to fall rate or fuel. You must not exceed fall rate, or zero fuel.

You will obtain the rating of Astronaut Pilot, by landing with regard to fuel. 80 pounds or more if you land between the two rock formations on the floor, and 50 pounds or more if you land between the crater wall and a rock formation.

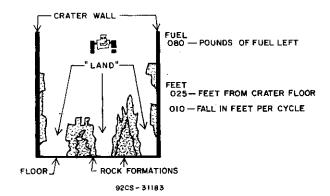

You will obtain the rating of Astronaut Captain by landing the ship with regard to fuel as per above, and if the fall rate is two feet per second or less. (Not an easy task, as you will soon discover.)

13. About Graphics

This game has some interesting graphic displays when you run out of fuel, crash, land too fast, when you land successfully. I will leave them to your discovery, as they are fun to watch.

14. Landing Sites

The final landing display will appear somewhat like the illustration below. You may land in any of the three locations pointed to. To land between the crater walls and the rock formations, you will have to first bring the Lander to a zero fall rate while hovering in the center landing area. Then bring the ship up and just over the rock formation, and then let it drop down to the landing site. At the last moment, a few

taps on the thruster button will slow the Lander to the required fall rate. It will take you many tries to land here, but don't give up, it can be done!!

NOTE: VIP Lunar Lander requires at least 3K of RAM. RAM memories are available to increase your VIP from 2K to 3K at your local computer store or by contacting:

16. VIP Blockout

VIP Blockout is a fast action two-player game of skill, strategy, coordination, and excitement!

Two players each using their own keypad control the movement of their respective lines (one solid and one checkered).

The object is for each player to maneuver his/her line in such a manner as to avoid collision with another line while at the same time trying to cause the opponent to collide with one. As the play continues, the speed of movement increases demanding faster thought and response.

How To Play VIP Blockout

- 1. DO NOT load the CHIP-8 interpreter! The entire game listing starting at location 0000 is provided. Load game in location 0000 through 048F.
- 2. Turn RUN switch on.
- 3. Movement of each player's line is controlled by pressing 2 to move line up, 8 down, 4 left and 6 right.

- 4. If the program is executed in a normal manner, by flipping the toggle switch to run, the playing field is defined by a border around its perimeter. However, if key 0 on either keypad is pressed while the run switch is flipped, the border is not generated and then the lines can wrap around the screen.
- 5. A match consists of nine games, the winner getting the most points.
- NOTES: 1. This game is programmed in color and has sound effects. It can be used with the VP590 Color board and VP595 Simple Sound board, or it will run on a standard VIP without color and sound enhancement.
- 2. This game requires a minimum of one VIP expansion keyboard (VP580) or two expansion keyboards for exciting "dual action". Expansion keyboards plug directly into the VP590 color graphics board or into the VP585 expansion keyboard interface. For these and other VIP accessories, contact your local computer store or:
